To Our Valued Customers:

Oldcastle BuildingEnvelope Warrenton now offers EnduroShield's easy clean protective coating to our full line of shower door glass products. EnduroShield can be applied to all glass products which require ease of cleaning, and reduces cleaning time by up to 90%.

EnduroShield is an invisible coating that protects against corrosive etching effects of contaminants such as oils, salts, dirt, hard water and soap scum. The hydrophobic and oliophobic nature of the coating means that even if a build up does occur, it can be much more easily removed. Furthermore, this coating will prevent any aging or deterioration from occurring, meaning the glass will look just as good now as it will in 10 years.

There is really no such thing as "self-cleaning" glass, however, this is one of the best in the market. EnduroShield does not require the use of revitalizers or after care products to ensure sustained performance.

They have also provided us with a copy of a recent certification by a global leading independent testing agency in Europe known for their thoroughness and procedures. This testing shows how the coating will last beyond 10 years for your customers. Futhermore, we are proud to announce that all EnduroShield treated glass will be given a 10 year warranty because of this testing, registered on their website with a unique code for each customer.

Please contact one of your local Oldcastle BuildingEnvelope Representatives for further details about the coating, testing, or warranty.

Regards,

Melody Johnson
